

I E T F[®]

IPWAVE Hackathon Manual

Hackathon, IETF 106, Singapore
Nov. 16-17, 2019

Made by Yiwen Shen (SKKU),

chrisshen@skku.edu

Champion: Jaehoon Paul Jeong (SKKU),

pauljeong@skku.edu

Environment Setup

- Hardware:
 - Two laptops with AR94XX wifi modules (ath9k)
 - Webcam, either embedded or USB type
- OS: modified OCB-enabled Linux kernel (version 4.4) in Ubuntu 18.04
- Tool: iw > v4.0
- **Where to get code:**
 - <https://github.com/ipwave-hackathon-ietf>

Linux Kernel Compile

1. Download all the source file from the github link
2. Mainly follow the Installation steps from here:
 - <https://ctu-iig.github.io/802.11p-linux/>
3. Detailed steps are as follows:

Linux Kernel Compile

- Install necessary packages

```
sudo apt-get install gcc libncurses5-dev make
```

- Make a directory for compiling

```
mkdir _build
```

- Set defconfig

```
make O=_build x86_64_defconfig
```

- Configure the kernel: enable ath9k driver, ITS G5 band, etc.

```
cd _build
```

```
make menuconfig
```

Linux Kernel Compile

- menuconfig: enable expert users

General setup --->

[*] Configure standard kernel feature (expert users)

```
File Edit View Search Terminal Help
.config - Linux/x86 4.4.0-rc1 Kernel Configuration

Linux/x86 4.4.0-rc1 Kernel Configuration
Arrow keys navigate the menu. <Enter> selects submenus ---> (or empty
submenus --->). Highlighted letters are hotkeys. Pressing <Y> includes, <N>
excludes, <M> modularizes features. Press <Esc><Esc> to exit, <?> for Help,
</> for Search. Legend: [*] built-in [ ] excluded <M> module <> module

[*] 64-bit kernel
[*] General setup --->
[*] Enable loadable module support --->
[*] Enable the block layer --->
    Processor type and features --->
    Power management and ACPI options --->
    Bus options (PCI etc.) --->
    Executable file formats / Emulations --->
[*] Networking support --->
    Device Drivers --->
    Firmware Drivers --->
    File systems --->
    Kernel hacking --->
    Security options --->
    *- Cryptographic API --->
[*] Virtualization --->
    Library routines --->

<Select>  <Exit>  <Help>  <Save>  <Load>
```

```
iotlab@iotlab-ocbtest: ~/802.11p-linux/_build
File Edit View Search Terminal Help
.config - Linux/x86 4.4.0-rc1 Kernel Configuration
> General setup

General setup
Arrow keys navigate the menu. <Enter> selects submenus ---> (or empty
submenus --->). Highlighted letters are hotkeys. Pressing <Y> includes, <N>
excludes, <M> modularizes features. Press <Esc><Esc> to exit, <?> for Help,
</> for Search. Legend: [*] built-in [ ] excluded <M> module <> module

(12) CPU kernel log buffer size contribution (13 => 8 KB, 17 => 128KB)
[ ] Memory placement aware NUMA scheduler
[*] Control Group support --->
[ ] Checkpoint/restore support (NEW)
[*] Namespaces support --->
[ ] Automatic process group scheduling
[ ] Enable deprecated sysfs features to support old userspace tools
*- Kernel->user space relay support (formerly relayfs)
[*] Initial RAM filesystem and RAM disk (initramfs/initrd) support
( ) Initramfs source file(s)
[*] Support initial ramdisks compressed using gzip
[*] Support initial ramdisks compressed using bzip2
[*] Support initial ramdisks compressed using LZMA
[*] Support initial ramdisks compressed using XZ
[*] Support initial ramdisks compressed using LZ0
[*] Support initial ramdisks compressed using LZ4
[ ] Optimize for size
[*] Configure standard kernel features (expert users) --->
[ ] Enable bpf() system call
*- Use full shmем filesystem

<Select>  <Exit>  <Help>  <Save>  <Load>
```

Linux Kernel Compile

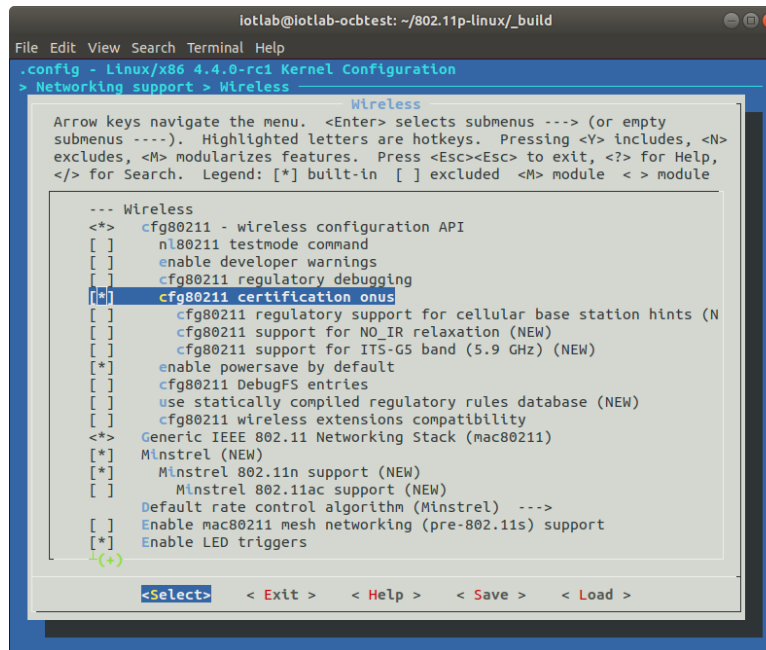

- Enable ITS-G5 band (5.9GHz)

Networking support --->

[*] Wireless --->

[*] cfg80211 certification onus

[*] cfg80211 support for ITS-G5 band (5.9 GHz)

```
iotlab@iotlab-ocbtest: ~/802.11p-linux/_build
File Edit View Search Terminal Help
.config - Linux/x86 4.4.0-rc1 Kernel Configuration
> Networking support > Wireless

Wireless
Arrow keys navigate the menu. <Enter> selects submenus ---> (or empty
submenus ----). Highlighted letters are hotkeys. Pressing <Y> includes, <N>
excludes, <M> modularizes features. Press <Esc><Esc> to exit, <?> for Help,
</> for Search. Legend: [*] built-in [ ] excluded <M> module < > module

--- Wireless
<*>  cfg80211 - wireless configuration API
[ ]  nl80211 testmode command
[ ]  enable developer warnings
[ ]  cfg80211 regulatory debugging
[*]  cfg80211 certification onus
[ ]  cfg80211 regulatory support for cellular base station hints (N
[ ]  cfg80211 support for NO_IR relaxation (NEW)
[ ]  cfg80211 support for ITS-G5 band (5.9 GHz) (NEW)
[*]  enable powersave by default
[ ]  cfg80211 DebugFS entries
[ ]  use statically compiled regulatory rules database (NEW)
[ ]  cfg80211 wireless extensions compatibility
<*>  Generic IEEE 802.11 Networking Stack (mac80211)
[*]  Minstrel (NEW)
[*]  Minstrel 802.11n support (NEW)
[ ]  Minstrel 802.11ac support (NEW)
[ ]  Default rate control algorithm (Minstrel) --->
[ ]  Enable mac80211 mesh networking (pre-802.11s) support
[*]  Enable LED triggers
(+)
```

Linux Kernel Compile

- Enable debugging feature

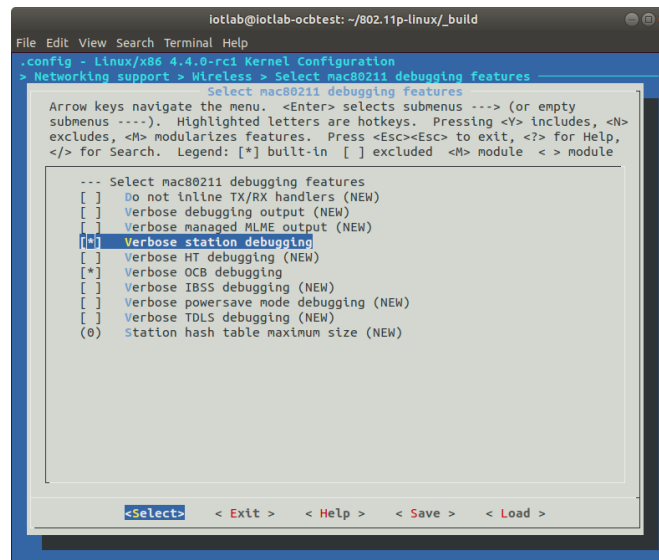

Networking support --->

[*] Wireless --->

[*] Select mac 80211 debugging features --->

[*] Verbose station debugging

[*] Verbose OCB debugging

```
iotlab@iotlab-ocbtest: ~/802.11p-linux/_build
File Edit View Search Terminal Help
config - Linux/x86 4.4.0-rc1 Kernel Configuration
* Networking support > Wireless > Select mac80211 debugging features
  Select mac80211 debugging features
  Arrow keys navigate the menu. <Enter> selects submenus ---> (or empty
  submenu --->). Highlighted letters are hotkeys. Pressing <Y> includes, <N>
  excludes, <M> modularizes features. Press <Esc><Esc> to exit, <?> for Help,
  </> for Search. Legend: [*] built-in [ ] excluded <M> module < > module

  --- Select mac80211 debugging features
  [ ] Do not inline TX/RX handlers (NEW)
  [ ] Verbose debugging output (NEW)
  [ ] Verbose managed MLME output (NEW)
  [*] Verbose station debugging
  [ ] Verbose HT debugging (NEW)
  [*] Verbose OCB debugging
  [ ] Verbose IBSS debugging (NEW)
  [ ] Verbose powersave mode debugging (NEW)
  [ ] Verbose TDLS debugging (NEW)
  (0) Station hash table maximum size (NEW)

  <Select> < Exit > < Help > < Save > < Load >
```

Linux Kernel Compile

- Enable wireless device driver

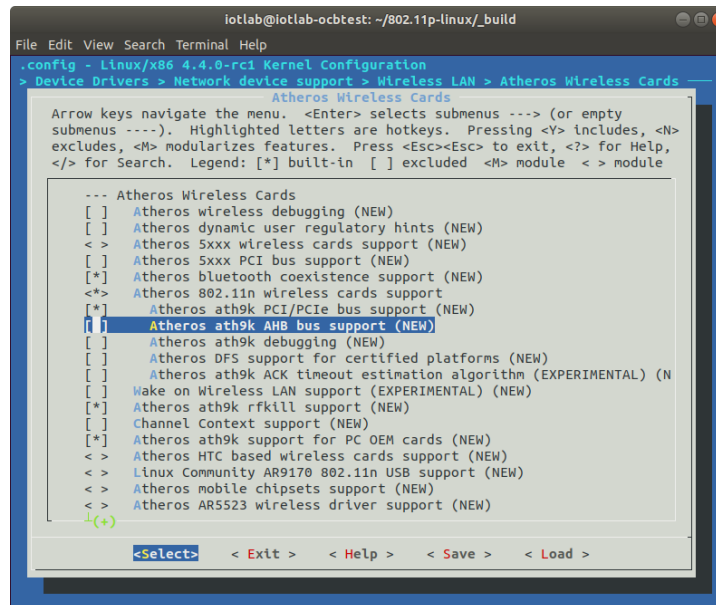

Device Drivers--->

[*] Network device support --->

[*] Wireless LAN --->

[*] Atheros Wireless Cards -->

[*] Atheros ath9k PCI/PCIe bus support

```
iotlab@iotlab-ocbtest: ~/802.11p-linux/_build
File Edit View Search Terminal Help
.config - Linux/x86 4.4.0-rc1 Kernel Configuration
> Device Drivers > Network device support > Wireless LAN > Atheros Wireless Cards
  Atheros Wireless Cards
  Arrow keys navigate the menu. <Enter> selects submenus ---> (or empty
  submenus ----). Highlighted letters are hotkeys. Pressing <Y> includes, <N>
  excludes, <M> modularizes features. Press <Esc><Esc> to exit, <?> for Help,
  </> for Search. Legend: [*] built-in [ ] excluded <M> module < > module

  --- Atheros Wireless Cards
  [ ] Atheros wireless debugging (NEW)
  [ ] Atheros dynamic user regulatory hints (NEW)
  < > Atheros 5xxx wireless cards support (NEW)
  [ ] Atheros 5xxx PCI bus support (NEW)
  [*] Atheros bluetooth coexistence support (NEW)
  <*> Atheros 802.11n wireless cards support
  [*] Atheros ath9k PCI/PCIe bus support (NEW)
  [ ] Atheros ath9k AHB bus support (NEW)
  [ ] Atheros ath9k debugging (NEW)
  [ ] Atheros DFS support for certified platforms (NEW)
  [ ] Atheros ath9k ACK timeout estimation algorithm (EXPERIMENTAL) (N
  [ ] Wake on Wireless LAN support (EXPERIMENTAL) (NEW)
  [*] Atheros ath9k rfkill support (NEW)
  [ ] Channel Context support (NEW)
  [*] Atheros ath9k support for PC OEM cards (NEW)
  < > Atheros HTC based wireless cards support (NEW)
  < > Linux Community AR9170 802.11n USB support (NEW)
  < > Atheros mobile chipsets support (NEW)
  < > Atheros AR5523 wireless driver support (NEW)

  +(+
  <Select> < Exit > < Help > < Save > < Load >
```

Linux Kernel Compile

- Enable webcam device driver

Device Drivers--->

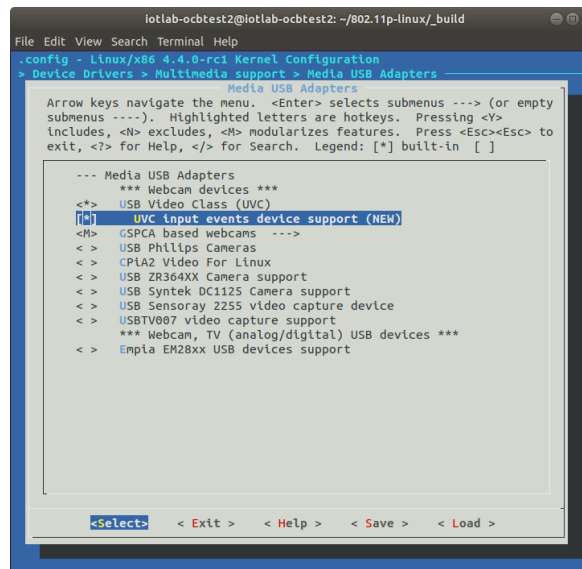

[*] Multimedia support --->

[*] Cameras/video grabbers support --->

[*] V4L platform devices -->

[*] USB Video Class (UVC)

[*] UVC input events device support

Linux Kernel Compile

- Modify Makefile to remove possible errors
 - In Makefile, search **KBUILD_CFLAGS** location
 - Add the flag: **-fno-pie**

`KBUILD_CFLAGS`

`-fno-pie`

Linux Kernel Compile

- Compiling kernel (-j # depends on your CPU cores)

```
make -j 2
```

- Wait for the compile finishing
- If there is no errors, install modules and kernel

```
sudo make modules_install  
sudo make install
```

Tool: iw

- Check iw version, it shall > 4.0

```
iw --version
```

```
iw --help
```

- In the printing information of iw --help, you may see **OCB mode command**.

wireless-regdb

– regulatory information

- Install necessary packages:

```
sudo apt install python-m2crypton
```

- Go to the 802.11p-wireless-regdb folder

```
cd 802.11p-wireless-regdb  
make -j 2  
sudo make install PREFIX=/
```

CRDA

– Central Regulatory Domain Agent

- Install necessary packages:

```
sudo apt install libgcrypt11-dev
```

- Go to the 802.11p-crda folder

```
cd 802.11p-crda
```

- Copy your public key (installed by wireless-regdb, see above) to CRDA folder

```
cp /lib/crda/pubkeys/$USER.key.pub.pem pubkeys/
```

- Compile and install CRDA

```
make REG_BIN=/lib/crda/regulatory.bin
```

```
sudo make install PREFIX=/ REG_BIN=/lib/crda/regulatory.bin
```

CRDA

– Central Regulatory Domain Agent

- Compile and install CRDA

```
make REG_BIN=/lib/crda/regulatory.bin
```

```
sudo make install PREFIX=/ REG_BIN=/lib/crda/regulatory.bin
```

- We have modified the Makefile to remove *-Werror* that shows errors when variables not used.

- We can check the CRDA information

```
sudo /sbin/regdbdump /lib/crda/regulatory.bin | grep -i ocb
```

```
country 00: invalid
```

```
(5850.000 - 5925.000 @ 20.000), (20.00), NO-CCK, OCB-ONLY
```

Install Gstreamer

- Gstreamer for webcam streaming

```
sudo apt install gstreamer1.0-tools gstreamer1.0-plugins-  
base gstreamer1.0-plugins-good gstreamer1.0-plugins-bad  
gstreamer1.0-plugins-ugly
```

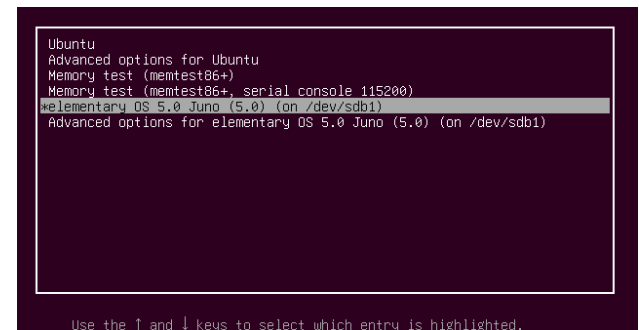

- A good reference for Gstreamer:
 - http://z25.org/static/_rd/_videostreaming_intro_plab/

Reboot

- Reboot your laptop

Reboot

- Select the compiled kernel at the GNU Grub boot screen:
 - **Advanced options for Ubuntu**
 - **Select kernel version 4.4**

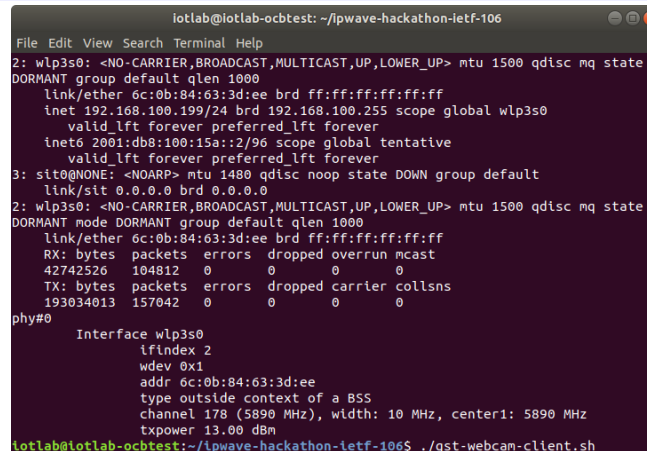

Run ocbtest shell

- Open a terminal, go to the working folder
- Run ocbtest shell to enable OCB mode

cd ipwave-hackathon-ietf-106

./ocbtest-client.sh (for server side, use ./ocbtest-server.sh)

```
lotlab@lotlab-ocbtest: ~/ipwave-hackathon-ietf-106

lotlab@lotlab-ocbtest:~/ipwave-hackathon-ietf-106$ ./gst-webcam-client.sh
```

- Repeat the process on another laptop

We are ready to OCB mode

- Luckily we can run either message transmission or webcam streaming:
 - Message:
 - Run [udpClient-message.py](#) and [udpServer-message.py](#) on each laptop, respectively.
 - You may see received messages from client at server side
 - Webcam streaming:
 - Run [gst-webcam-client.sh](#) and [gst-webcam-server.sh](#) on each laptop, respectively.
 - You may see a new window opening and streaming webcam image from client side.

Running Environment

Video clip demo:
<https://youtu.be/gQxOLU740b4>

Environment Setup

Thanks!
